***Applicant's Response***

In Applicant's Response dated 03/23/2007, Applicant amended Claims 1 and 12, and argued against all rejections previously set forth in the Office Action dated 12/21/2006.

Based upon the claim amendments and Applicant's arguments, all rejections previously set forth are withdrawn.

***Allowable Subject Matter***

Claims 1, 3, 12 and 15-17 are allowed.

The following is an examiner's statement of reasons for allowance:

***Claims 1 and 12:***

As argued by Applicant, the prior art fails to disclose or suggest a method of creating a program management chart that:

1. displays tasks within a selected set of data (i.e., "internal" tasks); and
2. concurrently displays one or more tasks outside of the selected set of data but associated with at least one of the "internal" tasks within the selected set of data (i.e., "external" tasks),

wherein the "external" tasks are displayed **without** opening a **linked** subfolder.

The closest prior art, Microsoft Project 2000 Bible, discloses that, in order for the project management system to display “external” tasks that are related to the “internal” tasks of a user-selected subproject whenever the subproject folder is opened, a user **must link** the “external” tasks to an “internal” task within the subproject folder. That is, if a selected subproject folder is opened and the “internal” tasks of the subproject folder have **no established links** to “external” tasks, then no “external” tasks are displayed. Conversely, if a selected subproject folder is opened and the “internal” tasks of the subproject folder **have established links** to “external” tasks, then the linked “external” tasks are displayed.

As indicated in the disclosure of the present application, both “*task data*” (i.e., “internal” tasks) and “*header data*” (i.e., “external” tasks) are included in the subproject folder (see Specification – Page 10, Line 18 through Page 11, Line 7; see Figure 5). The disclosure indicates that the “*header data*” is “data that is related to tasks outside of the selected set of data but is related to the tasks within the selected set of data” (see Specification – Page 10, Lines 31-33) and “allows a representation of a task to be displayed in the program management chart without having all of the data associated with the task open” (see Specification – Page 11, Lines 1-3).

Accordingly, as defined in Claims 1 and 12, the “*selected set of data*” (Claim 1, Line 3) and the “[*accessed*] *subset of data*” (Claim 12, Line 3):

1. correspond to the user-selected **subproject folder** taught in Microsoft Project 2000 Bible; and

2. include **no** data that is ***linked*** to any other data within the project management system.

Otherwise, the present invention would not accurately be defined by Claims 1 and 12, which indicate that the project management system concurrently displays "external" tasks that are related to the "internal" tasks of the selected subfolder **without** opening a **linked** subfolder.

Stated differently, the selected subfolder of the present invention must not be "linked" in any way to any other data within the project management system. Else, the selected subfolder would be both "opened" and "linked."

*Claims 3 and 15-17:*

These claims are dependent upon Claims 1 and 12, and are thus allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
